CoSoSys, developer of Data Loss Prevention (DLP), Device Control, Portable Storage Encryption and Mobile Device Management (MDM) software, today announced it has joined the VMware Technology Alliance Partner (TAP) program.

Cluj-Napoca, Romania., October 16, 2012 – (NETPR News) – CoSoSys, developer of Data Loss Prevention (DLP), Device Control, Portable Storage Encryption and Mobile Device Management (MDM) software, today announced it has joined the VMware Technology Alliance Partner (TAP) program. Members of the TAP program collaborate with VMware to deliver innovative solutions for virtualization and cloud computing. The diversity and depth of the TAP ecosystem provides customers with the flexibility to choose a partner with the right expertise to satisfy their unique needs.

“We welcome CoSoSys as a valued member of the VMware TAP program,” said Sheryl Sage, director, Alliance Programs, VMware. “This membership means customers can take full advantage of a streamlined virtualization and cloud infrastructure experience. VMware provides an online market place, VMware Solution Exchange (VSX), where customers can learn more about CoSoSys’ collaboration with VMware and our continued goal commitment to developing breakthrough technologies that can transform business.”

“We value our partnership with VMware because it allows our customers to rapidly deploy our solutions on the VMware virtualization platform for a fast implementation or evaluation. It used to take IT departments days, if not weeks, to implement and trial a Data Loss Prevention or Mobile Device Management solution. Endpoint Protector 4 as a virtual appliance can be implemented and evaluated within an hour, greatly impacting our clients’ network and data security posture. IT departments of our clients can now focus more on actual security tasks rather than server administration, and this is what counts for our clients’ security,” said Roman Foeckl, CEO of CoSoSys.

The VSX is an online virtualization and cloud infrastructure market place that provides customers with a single point of entry to discover, evaluate, and rate business solutions. CoSoSys product information, collateral and other assets are listed within the online VMware Solution Exchange at <https://solutionexchange.vmware.com/store/companies/cososys>.

With thousands of members worldwide, the VMware TAP program includes best-of-breed technology partners with the shared commitment to bring the best expertise and business solutions for each unique customer environment.

About CoSoSys

CoSoSys is specialized in network device control, endpoint security, data loss prevention (DLP) for Windows and Mac OS X, Mobile Device Management (MDM) and development of applications for portable storage device enhancement. The application portfolio includes functions from device control, mobile device security, file tracing and shadowing, password security, data synchronization and network security. CoSoSys distributes its products globally through Distributors, Resellers and directly to users at <http://www.EndpointProtector.com>. CoSoSys is an independent software developer since a management buyout from Astaro in July 2011. CoSoSys enjoys a continuously growing installation base of users worldwide and was recognized in 2011 as one of the fastest growing technology companies being a winner of the 2011 Deloitte Technology FAST 50 ranking for Central Europe. The company has offices in Germany, the United States and

Romania.
