CoSoSys launches U.S. operations offering endpoint security solutions

Feb 14 — CoSoSys, a developer of enterprise Endpoint Security and Policy Management solutions for USB devices, officially opened its doors last week in the U.S. with the intent to launch its Endpoint Security and Data Loss Prevention (DLP) solutions to customers in the Americas.

"This is an exciting time in the evolution of CoSoSys. We look forward to delivering high-end security and policy management solutions to our enterprise customers, thus helping them secure data and prevent data loss on USB devices," said Roman Foeckl, Managing Director of CoSoSys. "Also we are committed to developing and delivering world-class enterprise business applications with potential resellers and distribution partners who are leaders in their field and who are willing to invest in a successful collaboration targeting mutual future growth."

CoSoSys SRL specializes in network endpoint security and software development for portable storage device enhancement. The application portfolio includes functions from encryption, biometric security, data synchronization and network security. The company is headquartered in Cluj-Napoca, Romania and has sales representatives in the United States, Germany and Asia.

Aiming to introduce next generation endpoint security, data loss prevention and portable device management solutions to the US market, the CoSoSys Security office will host operations for sales, customer service, technical support and management, as well as working closely with strategic partners. The new office located in Silicon Valley has opened its doors on February 1st, 2008 and will be directed by a team of seasoned professionals with comprehensive expertise in the technology and security fields.
