

Secure it Easy™

USB-Firewall – Control USB and other Devices

Version (32/64bit): 2.0.4.0

Your personal and confidential data is only as safe as your endpoints are.

Secure it Easy is complementing your other security measures on your PC like signature-based security solutions and provides a proactive approach to enforce your rules of use for portable devices on your PC.

In a world where portable and lifestyle devices are increasingly transforming the way we work and live, Secure it Easy is designed to maintain productivity and make work and life more convenient, secure and enjoyable.

The whitelist based approach allows you to authorize specific devices for use on your PC so you can stay productive while maintaining control of what devices can not be used. Secure it Easy also gives you the power to monitor what data is transferred to and from devices by you and other users.

Controlled Endpoint Device Types:

- USB Flash Drives
(Normal USB Drives, U3, etc.)
- Wireless USB
- Memory Cards
(SD, MMC, CF, etc.)
- Card Readers
(internal and external)
- ZIP Drives
- Floppy Drives
- CD/DVD-Player/Burner
(internal and external)
- Digital Cameras
- Smartphones/BlackBerry/PDAs
- iPods/iPhone
- external HDDs
- FireWire Devices
- MP3 Player/Media Player Devices
- Biometric Drives

Secure it Easy acts like a Firewall between PC and controlled devices

KEY BENEFITS

- Immediate Security out of the Box
- Installs in less than one minute
- Stops podslurping instantly
- Puts end to data leakage
- Enterprise Level Security
- Monitoring and Reporting included

Endpoint Security for your Workstations and Notebooks

Protects any PC from threats posed by removable portable storage and endpoint devices like USB Flash Drives, iPods, internal CD/DVD-Player/Burner, Floppy Drives and other devices that could be intentionally or accidentally used to leak, steal, lose, virus or malware infect your data. Even self-executing devices like USB Drive with CD-ROM autorun feature such as U3 Drives will not be accessible and pose no threats.

Manage Portable Storage Devices

The PC's administrator is able to authorize the use of specific devices while all unauthorized devices remain blocked. By authorizing a certain device, the PC user will be allowed to access only this and other previously authorized devices. Other portable storage devices connected that where not authorized by the PC's administrator will not function.

File Tracing: Control your data flow

The *File Tracing* feature will track all data that was copied to and from prior authorized portable storage devices.

Device Activity Logging – Device History

A device activity log is saved for all devices connected along with all administrative actions such as device authorizations, giving a complete history of devices and users for detailed analysis.

E-Mail Notification

Instant E-Mail notifications are sent to the PC Administrator if a device without authorization is connected to the PC.

Graphical Analysis

Secure it Easy displays you at a glance the main device and data transfer activity for selectable time periods.

Administrative Control / Administrative Password

An optional administrative password can be set to authorize only one PC Admin to configure the application in case more users have Admin rights.

Network "Offline" Mode

Protected PCs or notebooks that are temporary disconnected from the internet remain protected and e-mail notifications are transmitted upon the next internet connection.

Enforce your endpoint security and find out who is transferring what of your data.

SYSTEM REQUIREMENTS

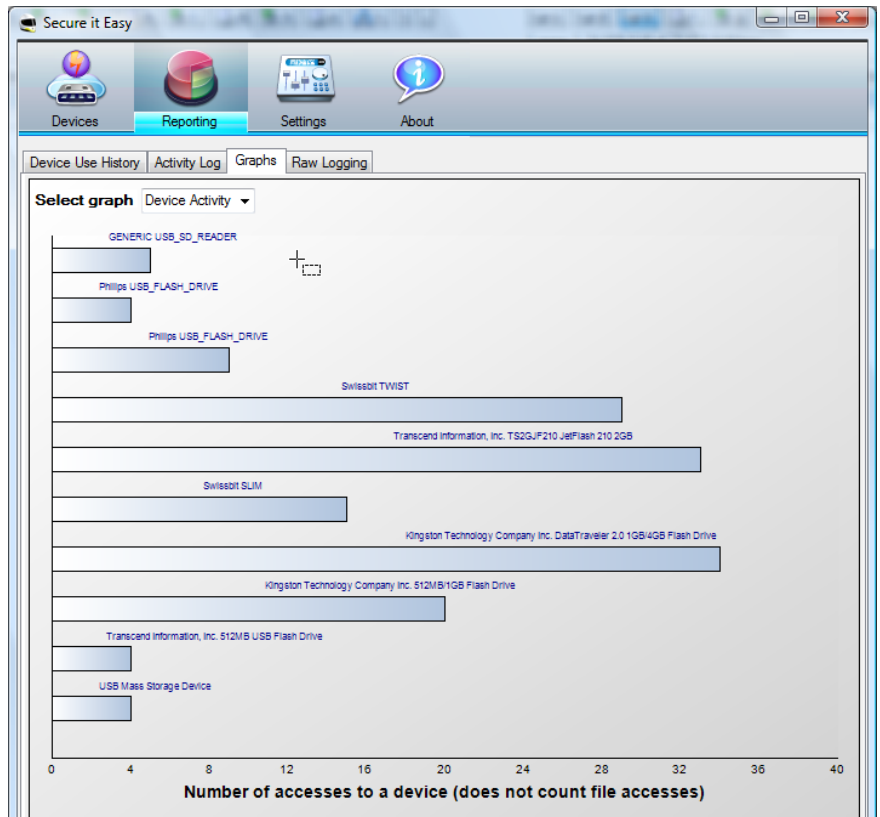

- Windows 7 (32/64bit)
- Windows Vista (32/64bit)
- Windows XP (SP2) (32/64 bit)
- Windows 2003 (32 bit)
- .Net 2.0 Framework
- min. 50 MB of HDD Space

Installation process takes only a minute and results in immediate protection.

Secure it Easy is password protected, so even security for users with administrative rights can be enforced.

The intuitive interface allows for efficient and fast administration.

Secure it Easy offers you a safe and secure working environment with portable storage and endpoint devices. User efficiency is not restricted since any authorized device can be used continuously on protected PCs while the network's endpoint security policy is enforced.

TrustedDevice / Enforced Encryption - protecting sensitive data in transit

The technology behind TrustedDevices is designed to certify that in your private or small office computing environment all the endpoint devices are not only authorized and controlled via Secure it Easy but also certified and trusted for protecting sensitive and confidential data in transit. This will assure that in the event a device is stolen or lost all the data stored on it is encrypted and therefore not accessible for other parties.
